

InkjetJobDispatcher

iret

Gesellschaft zur Entwicklung
elektronischer Steuerungen mbH

The InkjetJobDispatcher (IJD) software is the link between job management and marking printers. With the IJD, the marking texts reach the correct production line fully automatically. To the correct production line, incorrect entries are avoided, and makeready times are minimized. The templates for the markings are conveniently created with the iret AJWin software, the IJD then supplements these with the desired order data.

Key Features

- Integrated web server
- Flexible connections to order management
- customized adaptations
- Very good scalability

Printers

- alphaJET (Koenig&Bauer)
- Inkdustry
- Leibinger
- Videojet

Operating systems

- Linux
- Windows

Databases

- SQLite
- Microsoft SQL
- PostgreSQL

Optional

- REST API
